

RELEASE NOTES 44.0.4.0

The *PostalOne!* system Release 44.0.4.0 will be implemented on October 30, 2016 to introduce software modifications to the system. This includes corrections to issues previously identified in a prior release.

These Release Notes provide the contents of the release and affected subsystems.

Contents of this document are subject to change.

1.0 Mail.dat Client Downloads

There is no new Mail.dat client version with this release. Users should continue to use Mail.dat client version 44.0.0.0_PROD.

The current Mail.dat Client may be downloaded from the Business Customer Gateway (BCG) using the following path: Mailing Services → Electronic Data Exchange [Go to Service] → Mail.dat download (Windows 32-bit, Windows 64-bit or Solaris)

2.0 Corrections to Known Issues

This information is derived from External Trouble Reports (ETRs) Change Requests (CRs) and Engineering Change Requests (ECRs).

2.1 Electronic Data Exchange

Mail.dat post-finalization logic has been corrected to prevent duplicate extract records from being created and sent to Seamless Acceptance and Service Performance (SASP) and Intelligent Mail Visibility (IV) for co-palletized postage statements that have been reversed. Prior to this release, duplicate records were incorrectly created and sent to SASP and IV when a co-palletized Mail.dat statement was reversed. Even though SASP recognized the records as duplicates and did not import them, they were still incorrectly counted and reported as pieces which failed import to SASP. As a result, the Seamless Undocumented Summary Report displayed an inflated count for “# pieces not imported”. [10105 {E}](#)

2.2 Electronic Verification System (eVS)

An issue has been corrected that previously prevented adjustments from being calculated for unmanifested records from Parcel Return Service (PRS) mailers under certain conditions. If the unmanifested record had a non-PRS Package Identification Code (PIC), the adjustment was not calculated or updated on the eVS Monthly Account and Sampling Summary page. As a result, users saw incorrect adjustment amounts on the eVS Monthly Account and Sampling Summary page. [10191 {E}](#)

2.3 Reports

- The MicroStrategy Error Type report has been updated to only include eInduction duplicate barcode errors that were logged during the invoicing period. Prior to this release, some eInduction duplicate barcode errors that occurred after the invoice period closed were incorrectly displayed on the Error Type drill report. This was the result of a defect that incorrectly recorded eInduction barcode scans that occurred after the invoice was locked. The invoice and the error summary information on the Mailer Scorecard were both correct. With this release, eInduction duplicate barcode errors for scans that occur after the invoice period will not be included on the Error Type report for the current period. [10139 {E}](#)

3.0 Document Tracking

3.1 Change History

Release 44.0.4.0 Change 0.0

Last Saved: 10/26/2016 9:06 AM

| Date | Section | Title | Description |
|------------|---------|--------------------------------------|--------------------|
| 10/07/2016 | 2.1 | Electronic Data Exchange | Added ALM ID 10105 |
| 10/24/2016 | 2.3 | Reports | Added ALM ID 10139 |
| 10/25/2016 | 2.2 | Electronic Verification System (eVS) | Added ALM ID 10191 |
